Driving along Interstate 78 westbound from New Jersey to Pennsylvania just got easier thanks to Open Road Tolling. KS Engineers, P.C. (KSE) served as the design engineer for a modernized toll facility in Williams Township, PA owned and operated by the Delaware River Joint Toll Bridge Commission. This fast-tracked design/build project, built by A.P. Construction, Inc., was opened nearly two weeks ahead of schedule and allows motorists equipped with E-ZPass® to pay their tolls at highway speeds.

KSE knows that innovative design solutions are necessary to reduce delays and congestion along highways and roadways. For this project, KSE used a space frame canopy with high-speed transponder readers that remove the necessity of slowing down or stopping.

The Executive Director of the Delaware River Joint Toll Bridge Commission, Frank G. McCartney, is pleased with success of the project. "From the raw numbers we have so far, this facility has been working very, very well," he said. "The congestion that regularly occurred at the I-78 toll place has vanished. We hope that these results will encourage more motorists to get E-ZPass® transponders in their vehicles."

KSE is a leading provider of transportation design services in the tri-state area and has the knowledge, skill and experience to engineer solutions for the most complex transportation challenges. "KSE is committed to employing innovative design solutions to reduce delays along highways and roadways," stated KSE's President Kamal Shahid, PE. "We are proud to have worked on this important project and are pleased that current numbers clearly indicate an improvement in the driving experience of those who travel the I-78 corridor. For nearly 20 years, KSE has provided design services for highway and roadway projects, and it is always satisfying to see our innovative design techniques in action."

This DRJTBC modernized toll facility is keeping motorist driving along I-78 westbound from NJ to PA moving.

About KSE

Founded in 1991, KSE is an award-winning, multi-disciplinary MBE providing civil and structural engineering, land surveying, landscape architecture, construction management and construction support services in New Jersey, New York and Pennsylvania. With a staff of 170 professionals, KSE has provided essential engineering and construction management services to public and private entities throughout the region.
